Dear Examiner Coe:

Once again, thank you very much for granting us an interview at this late stage of prosecution. Through mutual understanding and cooperation, I hope we can bring this case to resolution.

For your convenience, I have listed below five possible ways of amending our independent claims which would hopefully make them allowable. Please review them. I will call you at 11:30 AM (Pacific Time) on April 22, 2003 as scheduled.

Amendment 1:

- 1. (Twice Amended) A composition containing Asiasari Radix extracts extracted through a chlorinated aliphatic solvent and having at least two therapeutically effective agents therein for improving memory and protecting brain cells against damage caused by excitatory amino acids and oxidative stresses.
- 12. (Twice Amended) A composition for improving memory and protecting brain cells containing a chloroform fraction of Asiasari Radix extracts obtained by the following sequential fractionation procedure: subjecting Asiasari Radix to extraction with a lower alcohol having between 1 carbon atom and 4 carbon atoms or organic solvent, the resulting Asiasari Radix extract being solublized in a methanol:water mixed solvent having a pH adjusted to 2-4 with acid and subjected to extraction with equal volume of a chloroform fraction of Asiasari Radix extracts for improving memory and protecting brain cells against damage caused by excitatory amino acids and oxidative stresses.

Amendment 2:

- 1. (Twice Amended) A composition containing Asiasari Radix extracts extracted through a solvent system containing a lower alcohol and water and having a mixture of at least two therapeutically effective agents therein for improving memory and protecting brain cells against damage caused by excitatory amino acids and oxidative stresses.
- 12. (Twice Amended) A composition for improving memory and protecting brain cells containing a chloroform fraction of Asiasari Radix extracts obtained by the following sequential fractionation procedure: subjecting Asiasari Radix to extraction with a solvent system containing water and a lower alcohol having between 1 carbon atom and 4 carbon atoms or organic solvent, the resulting Asiasari Radix extract having a mixture of at least two therapeutically effective agents therein and being solublized in

a methanol:water mixed solvent having a pH adjusted to 2-4 with acid and subjected to extraction with equal volume of chloroform to obtain a chlorotorm fraction of Asiasari Radix extracts for improving memory and protecting brain cells against damage caused by excitatory amino acids and oxidative stresses.

Amendment 3:

- 1. (Twice Amended) A composition containing Asiasari Radix extracts having at least two therapeutically effective agents therein and being subjected to multiple pH adjustments with an acid and a base for improving memory and protecting brain cells against damage caused by excitatory amino acids and oxidative stresses.
- 12. (Twice Amended) A composition for improving memory and protecting brain cells containing a chloroform fraction of Asiasari Radix extracts obtained by the following sequential fractionation procedure: subjecting Asiasari Radix to extraction with a lower alcohol having between 1 carbon atom and 4 carbon atoms or organic solvent, the resulting Asiasari Radix extract being solublized in a methanol:water mixed solvent, having a pH adjusted to 2-4 with an acid and to about 10 with a base and subjected to extraction with equal volume of chloroform to obtain a chloroform fraction of Asiasari Radix extracts for improving memory and protecting brain cells against damage caused by excitatory amino acids and oxidative stresses.

Amendment 4:

- 1. (Twice Amended) A composition containing Asiasari Radix extracts extracted through a chlorinated aliphatic solvent and having at least two therapeutically effective agents therein, the extracts being subjected to multiple pH adjustments with an acid and a base for improving memory and protecting brain cells against damage caused by excitatory amino acids and oxidative stresses.
- 12. (Twice Amended) A composition for improving memory and protecting brain cells containing a chloroform fraction of Asiasari Radix extracts obtained by the following sequential fractionation procedure: subjecting Asiasari Radix to extraction with a lower alcohol having between 1 carbon atom and 4 carbon atoms or organic solvent, the resulting Asiasari Radix extract being solublized in a methanol:water mixed solvent, having a pH adjusted to 2-4 with an acid and to about 10 with a base and

SBG&B

subjected to extraction with equal volume of a chlorinated aliphatic solvent such as chloroform to obtain a chloroform fraction of Asiasari Radix extracts for improving memory and protecting brain cells against damage caused by excitatory amino acids and oxidative stresses.

Amendment 5:

- 1. (Twice Amended) A composition containing Asiasari Radix extracts having at least two therapeutically effective agents therein for improving memory and protecting brain cells against damage caused by excitatory amino acids and oxidative stresses.
- 12. (Twice Amended) A composition for improving memory and protecting brain cells containing a chloroform fraction of Asiasari Radix extracts obtained by the following sequential fractionation procedure: subjecting Asiasari Radix to extraction with a lower alcohol having between 1 carbon atom and 4 carbon atoms or organic solvent, the resulting Asiasari Radix extract being solublized in a methanol:water mixed solvent, having a pH adjusted to 2-4 with an acid and subjected to extraction with equal volume of chloroform to obtain a chloroform fraction of Asiasari Radix extracts for improving memory and protecting brain cells against damage caused by excitatory amino acids and oxidative stresses.
